

Metadata and facets

```
import module namespace md =  
"http://exist-db.org/metadata"
```

```
md:set-value($resource as item, $key as xs:string, $value as xs:string)
```

```
md:get-value($resource as item, $key as xs:string) as xs:string
```

```
md:delete($resource as item, $key as xs:string)
```

Backup and restore integration

XQuery functions:

- `system:export`
- `system:import`

Facets

Text query => Result (with numbers)

Drill down

Text query with facet fields => Results

Reindex on metadata change?

- One metadata pair change
- Several metadata pairs change
- Extract values from xml data during indexing

Q&A
